

KRISHNA CHAITANYA YARLAGADDA

AI-ML ENGINEER

krishnachaitanyayarlagadda2134@gmail.com | 9662213841

EDUCATION

Ganpat University Degree in Bachelor Of Technology in Computer Science Artificial Intelligence CGPA: 6.79	Mehasana,Gujarat 2021 - 2025
Narayana Junior College Intermediate MPC Percentage: 49%	Guntur,Andhra Pradesh 2019 - 2021
Saint Fransis DeSales Degree in State Board Of Secondary Education GPA: 9.8	Parchur,Andhra Pradesh 2018 - 2019

EXPERIENCE

Intern Python Programmer	5th May-2024 - 5th August-2024
-----------------------------------	--------------------------------

SKILLS

Programming Languages:	Python, R, SQL
Libraries/Frameworks:	NumPy, Pandas, Scikit-Learn, Matplotlib, NLP Libraries
Tools / Platforms:	Jupyter Notebook, Rstudio, PowerBI, IDLE, Pycharm Community, Google Colab
Databases:	SQL, MongoDB

PROJECTS / OPEN-SOURCE

Used Car Resale Price Prediction	<i>Python,Machine Learning</i>
It is easy for any company to price their new cars based on the manufacturing and marketing cost it involves. But when it comes to a used car it is quite dicult to dene a price because it involves it is inuenced by various parameters like car brand, manufactured year and etc. The goal of my project is to predict the best price for a pre-owned car in the Indian market based on the previous data related to sold cars using Linear Regression and various Machine Learning Algorithms.The goal of this project is to create an efficient and effective model that will be able to predict the price of a used car by using the Linear Regression algorithm with better accuracy.	
Sales Analysis	<i>Excel, Python (pandas, Scikit-learn), tableau, Jupyter Notebook</i>
Leveraging my expertise in data analysis and visualization, I extracted insights from sales data to drive data-driven decision-making and strategicplanning. Gathered and cleaned sales data from varioussources,Conducted data preprocessing tasks such as data cleaning, normalization, and feature engineering to prepare the dataforanalysis. Performed exploratory data analysis to uncover patterns, trends, and anomalies in the sales data, using techniques such as descriptive statistics, data visualization, and correlation analysis.	
Crop Yield Prediction	<i>Python , Machine Learning</i>
This project aims to forecast crop yields using data-driven techniques, helping farmers and agricultural stakeholders optimize their decisions. It leverages machine learning models, such as regression and deep learning, to analyze various factors like weather conditions, soil quality, historical crop data, and satellite imagery. The objective is to predict future yields accurately, enabling better resource allocation, improved food security, and sustainable agricultural practices. The project involves data collection, preprocessing, model training, evaluation, and deployment to provide real-time predictions and insights to users.The goal is to provide timely, accurate predictions to support decision-making, improve agricultural productivity, minimize risk, and enhance food security.
