DATABASES

SQL

PROJECTS / OPEN-SOURCE

FAKE CREDIT CARD DETECTION

Python, Machine learning

- Utilizes advanced algorithms to detect irregular patterns in credit card transactions.
- Analyzes the geographic location of transactions to identify discrepancies or suspicious activity.
- Tracks spending habits and compares them against established patterns to flag potential fraudulent transactions.
- Identifies unusual spending behaviors or transactions that deviate from typical user activity.
- Incorporates machine learning techniques to continuously learn and adapt to new fraud patterns.

TO DO LIST:

Javascript, Html, CSS

Designed a user-friendly To-Do List application allowing users to effortlessly Add, Remove, and Update tasks. Streamlined interface for efficient task management, enhancing productivity and organization.

CERTIFICATIONS

- The Complete Python Bootcamp From Zero to Hero in Python - **UDEMY**
